

# World Equity Market Capitalization

As of December 31, 2015

WHERE DIMENSIONAL INVESTS: ■ DEVELOPED MARKETS ■ EMERGING MARKETS ■ NOT INVESTED

How do we measure the world? Thinking only in terms of landmass can distort investment decisions. Directly comparing the markets of nations produces some surprising results. Measures such as population, gross domestic product, or exports do not directly indicate the size or suitability of investments in a market. This cartogram illustrates the balance of equity

investment opportunities around the world. The size of each country has been adjusted to reflect its total relative capitalization. Of course, the world is in motion—there is no fixed relationship between markets, and their proportion can change over time. Viewing the world this way brings the scope of diversification into new light and helps clarify allocation decisions.
